	Engagement	Dose or exposure	Efficacy	Safety
Human genetics	no clear effect	no clear effect	**31% fewer 63 stops**	no clear effect
Tumour genetics	no clear effect	no clear effect	no clear effect	no clear effect
Mouse genetics shows the disease	no clear effect	no clear effect	**22% fewer 129 stops**	no clear effect
RNA change in diseased tissue	no clear effect	**166% more 14 stops**	no clear effect	no clear effect
Earlier drugs on the same target	**47% fewer 29 stops**	no clear effect	**34% fewer 395 stops**	no clear effect
Drug binding measured	no clear effect	no clear effect	**50% more 194 stops**	no clear effect
Published animal studies of the drug	no clear effect	no clear effect	**16% fewer 594 stops**	no clear effect
Drug shown to engage its target in people	not testable	no clear effect	no clear effect	no clear effect
Standard genetic safety flags	no clear effect	no clear effect	no clear effect	no clear effect
Mutant mice: vital-organ phenotype	no clear effect	too few stops	no clear effect	no clear effect
Earlier drug on the target stopped for safety	no clear effect	**171% more 12 stops**	no clear effect	no clear effect
Drug binds another protein within 10-fold	no clear effect	no clear effect	no clear effect	no clear effect
