Engagement
never engaged the target
Dose
dose capped or exposure failed
Efficacy
engaged the target, no benefit
Safety
stopped for harm
Human genetics
Tumour genetics
Mouse genetics shows the disease
RNA change in diseased tissue
Earlier drugs on the same target
Drug binding measured
Published animal studies of the drug
Published study of the drug engaging its target in people
Safety signals
Standard flags: gene intolerant to loss in people, or knockout mice die young
Mutant mice show a vital-organ phenotype
An earlier drug on the target stopped for safety
Drug binds another protein within 10-fold
0.5×
1×
2×
Risk of that kind of stop, programs with the evidence against those without (adjusted, 95% range; left of 1 = fewer stops)
